**DETAILED ACTION**

***Claim Rejections - 35 USC § 102***

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-9 are rejected under 35 U.S.C. 102(b) as being anticipated by Lacombe U.S. Patent No. 6,496,317.

Regarding claims 1-19, the rejections applied to claims 1-9 in the previous Office action mailed March 8, 2005 are herein repeated for the same reasons (see Response to Arguments).

Regarding claims 10-19, claims 10-19 have limitations similar to those treated in the rejections of claims 1-9 discussed in the previous Office action mailed March 8, 2005. The rejections previously applied are herein repeated for the same reasons (see Response to Arguments). Amended claim 10 however now recites the following limitation, further disclosed by Lacombe:

A circuit coupled with the head write driver and adapted to selectively provide pulsing signals which define an overshoot amplitude of the positive write edge and the negative write edge (i.e. signal transitions) of the write current signal (see Figure 4 and column 7, lines 10-17).

***Response to Arguments***

3. Applicant's arguments filed June 23, 2005 have been fully considered but they are not persuasive.

On pages 6 and 7 of the response filed on June 23, 2005 Applicant argues that Lacombe U.S. Patent No. 6,496,317 fails to disclose or suggest a circuit coupled to the write head driver circuit and adaptive to selectively provide pulsing signals which define an overshoot amplitude of the positive write edge and the negative write edge of the write current signal since Lacombe discloses current signals (i.e. WBX and WBY) that do not relate to the amplitude of the overshoot. The Examiner however, respectfully disagrees since the signals WBX and WBY do relate to the amplitude of the overshoot as can be observed in Figure 7. As shown in Figure 7, signals WBX and WBY exhibit amplitudes represented on the Y axis. It is considered that the delay circuit only delays the signals WBX and WBY and is what relates to the duration of the coil overshoot current and therefore it is considered that the reference meets the limitations of the Applicant's invention as claimed.

#### ***Conclusion***

4. **THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire **THREE MONTHS** from the mailing date of this action. In the event a first reply is filed within **TWO MONTHS** of the mailing date of this final action and the advisory action is not mailed until after the end of the **THREE-MONTH** shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than **SIX MONTHS** from the mailing date of this final action.
